Methylene Blue
Analysis

CUSTOMER NAME: Micor Corp
ADDRESS: 800 Claremont Ave. Bensalem, Pa. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (<) 1.4 mg (micrograms) indicate archival quality, and greater than (>) 1.4 mg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD (<) 1.4 mg	DOES NOT MEET ANSI STANDARD (>) 1.4 mg
MARR: Age Bureau 1414-15, 16, 17	.11	✓	

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI standard 173.1-M1: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same standard sets the archival limit at 1.4 mg for residual thiosulfate.

A close-up of a diamond-shaped calibration target. It features a grid of black squares, each containing a white number. The numbers are arranged in a pattern that suggests a 4x4 grid, though some are partially cut off. The numbers visible include 22, 23, 20, and 21.

ZYXWVU

[illegible]

A diamond-shaped calibration target with a grid of numbers and lines. The numbers are arranged in a pattern that suggests a 3x3 grid, with some numbers being larger or bolder than others. The numbers visible are 22, 20, 22, 20, 22, 20, 22, 20, 22.

MICROFILM CORP.

Methylene Blue
Analysis

CUSTOMER NAME: Micor Corp.
ADDRESS: 800 Claremont Ave. Bensalem, Pa. 19020

Your sample film strips have been tested for archival quality (residual thionefate concentration), they were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than (1) 1.4 mg (micrograms) indicate archival quality, and greater than (1) 1.4 mg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD (< 1.4 mg)	DOES NOT MEET ANSI STANDARD (> 1.4 mg)
1414-15, 16, 17	1.1	✓	

Archival quality, as measured by residual thionefate concentration, is defined in ANSI standard IT9.1-1981: "A photographic film coupon and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same standard sets the archival limit at 1.4 mg for residual thionefate.
